Scientific studies have already warned us that climate change could drive a million of the world's species to extinction as soon as 2050. We deeply acknowledge the contributions of the scientists for provoking us to do something for protecting all the species of the world from changing the climate vulnerabilities due to gradual Global Warming.

The drama “THE UNITED SPECIES ALLIANCE (USA)” is a yearlong work of the Coastal Development Partnership (CDP). Although Jahangir Hasan Masum conceptualizes the drama but without B.R. Khan it would never be realized. It is kind of self-reflection using the spiritual consciousness and indigenous ethics & morality. Although English is not our mother tongue, we choose the English as the language of the drama to outreach children all over the world. Besides, we were concerned more to focus on the context than literal beauty of the sentences.

A majority of the world's biologists now believe that if current trends continue, half of all species of plants and animals living today will be extinct by mid-century. The global public, however, is almost entirely unaware of this crisis. This is one of the key reasons encouraged all the CDP members to provide their voluntary support with facts, photos and whatsoever needed to complete/enrich the drama.

Editor's View

We, the humans, only care for those species that somehow directly provide benefits to us. This implies that those species whose contributions for the humans are not visible will not receive public attention and could easily go to extinction before we notice it

We overlooked the scientific fact that we are living on a Planet where one quarter of all mammal species are facing extinction within the next 30 years. Every species of tiger on Earth is in imminent danger of extinction. We forgot that money could not bring back the extinct species.

According to the IPCC, 20% to 30% of species of the world might face extinction due to climate change by 2100. The greenhouse gas emissions could cause oceans to acidify with carbonic acid and may endanger the marine species.

The key message of the drama is that all the species contribute in their own way to keep the human species alive. The drama tries to promote the notion that all the species have the rights to survive as equal as the rights of the human species. The drama also highlights the role of forests for absorbing CO₂ from the atmosphere, regulating climate, water and nutrient cycle and for providing homes for thousands of different animal and plant species.

Profess of the Dramatist

The Planet, we call Earth is the fifth largest in our Solar System. It is the third in row from the Sun. Scientists presume that the planet is aged about 4.6 billion years. It is the only living Planet in the Universe, so far discovered. No other planet possesses the conditions for the evolution of life except the Earth.

Everything has undergone changes. Not only the days and nights, but also the weather, the climate, the atmosphere, the frozen poles of the planet and the snow-covered peaks of the mountains have undergone changes. The climate of the planet has undergone abnormal changes. These changes have brought about many changes in the animal kingdom. This is the only living planet in the Universe.

Every living being on this living planet has two mothers. It is the fact. As a human species of the 'Life' we have the mother, who conceived, incubated, undergone various type of troublesome inconveniences and suffer during confinement, tolerates the throes of labour and pangs of child birth and the other one is the motherland, Madre Madonna Mae. The Planet Earth. We are morally bound to respect both the mothers and remain grateful to them.

We the human species of Life are linked with other species of Life in such a manner that we cannot disregard it.

How could we claim ourselves to be civilized in this twenty first century; when the planet is in throes of Life's annihilation due to gradual global warming and climactic climate change?

Hence being human, let us be humane towards other species of the 'Life'. If we claim ourselves to be civilized, let us behave like that true to the sense. Let us try to probe regarding other species of Life's speculation about the human species. We have other species of 'Life' neighboringus. They are also the inhabitants of this planet. If we talk about "RIGHTS", these species are supposed to be possessing the same rights and freedom of existence equally and co-sharing the environment and atmosphere of this planet. Researches show that these species of Life are not at all less important as far as the question of our survival and existence on this planet is concerned.

Now, let us see what all these species think about the human species of life on the Planet Earth. Welcome to the "The Last Drama on the 'Living planet" by theUnited Species Alliance (USA).

THE UNITED SPECIES ALLIANCE

The Last Drama On The 'Living planet' 'Madre Madonna Mae'

COMMENTARY OF THE DRAMA

[Please accommodate yourselves cozily in the seats in front of the screen. As soon as the guests are seated the screen will be drawn aside automatically, to show you a vista vision on a location in the Sunderban of Bangladesh.]

We shall come to describe Sunderban after giving a brief description of the country named Bangladesh. Bangladesh came into existence in the month of December in 1971 as a free country after a war of liberation, getting rid of an invading army of Pakistan. Geographically the country is situated like the secret and the most sacred part of a lady, between apart legs of the Asian continent, one leg having Myanmar and the other having India. The Bay of Bengal, by virtue of its situation, is naturally privileged to encroach upon her coasts with Monsoon havocs like Nargis, Aila, Sidor etc. The country, being very fertile, is densely populated, which is more than fourteen hundred million. In addition, this country is the most vulnerable due to climate change in accordance with the UNFCCC and IPCC investigative Research Teams' reports.

The country's ecology consists of 5000 species of flowering plants, 750 species of birds, 150 species of water birds 500 species of fishes, 125 species of mammals', 124 species of reptiles, 19 species of Amphibians. Out of this lot, 50 species of vertebrate animals 250 species of birds, 27 species of plants are endangered. Saline water from the Bay of Bengal has already encroached upon a vital portion of the country's crop yielding landmass and interior river streams of inland rivers.

The world famous mangrove forest Sunderban is the Pride of Bangladesh and this famous forest is going to be inundated due to sea level rise. The Sunderban is having an area of 5,77,000 hectares with 240 Celsius temperature. Annual rainfall is about 1600 mm. It is having 450 tributaries and the biggest river is named 'PASHUR', beside 18 to 20 more rivers. The Sunderban, also possesses 330 species of plants 42 species of mammals', 35 species of reptiles, 9 species of amphibians, 270 species of birds 53 species of sea fishes 124 species of deep water fishes, 24 species of shrimps, 8 species of lobsters, 7 species of carapace and 3 species of tortoise. Out of these lot near about 2 species of amphibians, 14 species of reptiles, 25 species of birds, and 5 species of mammals are facing extinction. It appears to be a joke at this juncture of climate change phenomenon that the Sunderban has been evaluated at a price of 15 thousand crores of taka for its carbon sink capability, whereas the atmosphere of Bangladesh cannot get rid of the pollution due to emission of GHG and the valuation of the Bangladesh area's atmosphere amounts to 11,38,61,348 million US dollars@ of 1 dollar per ton of air. So what is being paid for what? Pollution or sink? or just a bit of kindness?

[Let us pay our attention towards the stage with drawn up curtains as the seats are filled up].

SCENE – 1 (Commentary running)

Venue as seen on the stage in vista vision is the Sunderban.

RBT Garjon, a Royal Bengal Tiger (RBT) is alone on the stage. He is unlike others. RBT Gorjon happens to be the present Chief of the Jungles in the Asian Continent. He is always thoughtful but

**Royal Bengal Tiger (RBT)
Garjon**

extra sensitive. He is at present thinking about the recent years as he has found that the nature of the jungle has undergone changes. The Nature has become sort of unnatural. Behavior of the Nature reveals differences than the past days for example, seasons have undergone changes. Previously there used to be six seasons, but now, there are only three prevailing and that is also not of definite character. The seasons are suffering from irregularities. Only summer, winter and the rainy days can be observed these days. This unnatural phenomenon, that is, unable to identify the seasons has made RBT Gorjon restless mentally. He does not know about other places, but in Bangladesh, RBT Gorjon could bet

on the distinctive changes in the seasons. Previously the seasons could easily be identified just after two months duration of every season. However, now-a-days the seasons can't be distinctly differentiated.

The day is hot. RBT Gorjon felt the urge of a nap. An hour or so earlier, he had a nice lunch over a fawn, hence he felt a little lethargic with the extra heat of the day. He leisurely reached his spot of choice, a very favorite spot under a kewra tree, where the leaves and branches of the tree offered him appropriate shady coolness for a luxurious nap. The resort area of RBT Gorjon is surrounded by a tributary river. The banks of the river are lined up with Gol trees backed up by Kewra and other trees. The trees have grown in such an arranged manner that the RBT Gorjon's resort appears to be a fortress front age. The place is shady and spacious.

The Sun being fed up with the routine job of traversing a lonely path and rendering services to the planets of its family, felt sort of bored with the duties and started to slide down to his nocturnal resort somewhere in the western horizon, for a hearty rest. The slightest disturbance in the flowing water of

the tributary sensed by RBT Gorjon made him fully awake. But he did not make any movement. A few seconds later he heard a gurgling whisper addressing him. [Commentary ends]

SCENE – 1

Water is rising and something is changing

[Through a narrow clearing between two Gol trees, an old crocodile raised itself from the water of the river. Its tail portion remained in the water. Gorjon stretched, yawned, and leaned against the trunk of the big kewra tree, prepared himself for a discussion, without any preamble the veteran crocodile said:]

Ollo-Gorjon, are you awake?

- Gorjon** : Ye, how are you Croc?
- Oldcrocodile** : Not so good, Gorjon, that's why I have come to visit you and discuss some unusual happenings, of the recent days.
- Gorjon** : Come in please.
- Croc** : Gorjon, I don't know how you'll take it, but there's something wrong. I may be old enough but my observations are not bad as yet. I feel sort of unnaturalness in the environment now a days.
- Gorjon** : How is that? What makes you feel so?
- Croc** : Don't you find some change in the day temperature?
- Gorjon** : Oomn, but how it matters?
- Croc** : It matters a lot. First, this change in temperature, I am feeling since long. Previously, I did not feel the changes seriously. Now, it appears that the heat is increasing every day. The heat is givingme burning sensations.Besides, the fishes are scarce now. Shoals of fishes have shifted away from this area. We don't know how to survive without food. We shall have to starve and then die without food and shelter.
- Gorjon** : Do you think the situation has worsened to that extent?
- Croc** : What I am telling you, is the bitter truth of my life.
- Gorjon** : Do you think the fishes have gone in deep water or what?
- Croc** : Oomn, those are out of our reach now.
- Gorjon** : But, I think, the level of water has risen,. It is more than the last year.
- Croc** : Right you are. Very right. We have found that too.
- [A panting fox interrupted them. In broken speech the fox:]*
- Fox** : May, I come in, uncle? I have some information...for you.
- Gorjon** : Come in foxy, what's wrong? you seem to be panting and very tired too.

- Fox** : (Calming himself down to some extent) oomn, uncle, I have....I have come....from a very long...distance.
- Gorjon** : Who chased you, and what for? you are safe now. So, calm down. There's nothing to be afraid of, you now tell us what's it?
- Fox** : Uncle, two days back, I went to a locality at night, to have some hens or ducks from the dweller's hencoop. Nevertheless, I found the residents are insomniac. They were discussing something and it appeared that the topic was of serious nature. One of them was talking about climate change. What is climate change uncle?
- Gorjon** : Change means loss of originality, it may be shape, size, qualities, that means basic properties of something. Climate change means say. Previously we used to identify, even, visualize the changes of six seasons. There used to be six distinctive seasons in this region. But the cause of this changing may be temporary.
- Croc** : Here you are, Gorjon, this change is not a temporary one. Because it has happened gradually.
- Fox** : The topic was a new one to me and I lent my ears eagerly to learn more. What I gathered from their discussion, is not at all healthy for the living beings. What to talk about our sustenance, we may not have any scope to survive even.
- Croc** : Gorjon, I have found the clue to the raised water level.
- Gorjon** : (Thoughtfully) What is it?
- Croc** : You know, the increasing heat has definite causes and the increased heat has melted ice in the poles and mountain peaks, increasing the volume of water. This means.....
- Gorjon** : This means the Sunderban is going to be underwater and we shall not have any dry space to live on, is it not?
- Croc** : Exactly. You are very correct. However, did you visit the southernmost small islands recently?
- Gorjon** : No, I am sorry, although I should have. It is my duty.
- Croc** : I had been there a few days ago. No trace of those islands. Those are already under water now. We could not bask in the sun on any island over there.
- Gorjon** : So, the rate of change seems very quick. With the increased heat there may be other mishaps like Nargis, Aila, Sidor and may be many more.
- Croc** : Oom, distresses never come alone.

- Fox** : In that case we must do something. At least we can warn other species of the 'Life' to be aware of the situation.
- Croc** : Listen foxy, did those people talk about the rise of water level?
- Fox** : Hua, Hua (means yes yes!) see grandy, I doremember now. Do you know what happened? One of those took the light in his hand and called others to follow, as if he was going to show them something new. I also crept along in the darkness. The man who held the light showed others the previous year's highest watermark. He was telling others that mark of last year was much lower than the present level. Moreover, it is now rising and rising. No receding, nothing of the sort.
- Gorjon** : (Thoughtfully) But this is not the time for those islands to be under water. In this winter season, there should have been no water at all on the land. So, evidently, we are in trouble. And very serious trouble. Indeed.
- Croc** : See Gorjon, I may have to keep on floating, but what about you and others? I mean all the species of Life in the Sunderban? The water is definitely rising to inundate it.
- Fox** : Yes, grandy, I remember, they were telling the same thing. But they said it would take a few years or decades.
- Croc** : We can't wait for that, Gorjon, I think it will be much better if we try to get more information regarding the changes. Then, after discussion with others we shall have to take up course of actions. Do, you agree?
- Gorjon** : (Thoughtfully) Oomn. You are very right on the point.
- Croc** : Then we must send messengers to everywhere for all the species of Life immediately and to collect information data as well.
- Fox** : And throughout the entire planet, the *Madre Madonna Mae*. Right?
- Croc** : Very right. Okay Gorjon, I am not going to waste time- see you (and he slideoff to the tributary river)
- Gorjon** : Come on foxy, let us talk about the plans and Programs and problems. (They departed from the stage)

The curtain dropped.

And as the curtain dropped, sound of music from long long distances started pouring in. The music was of ancient days funeral, (bugles), of lamenting sirens, sorrows of fairies. Laments of sea gulls, dogs laments, lamenting air blowing past graves of cemeteries. It is not horrific, but so saddening that the minds of the people, listening to the lamenting nature. The *Madre Madonna Mae*. The planet Earth- a lone Planets sorrowful expressions of sighs- spreading over the plane in which the Universe exists. [An unusual composition of Tansen and Ludwig Van Beethoven. [Combined instruments – East and West's Musical instruments like violin, shehnai, flute, orchestra etc.]

SCENE – 2

A great conference is going on: First of its kind in the entire universe.

Commentary-

- Time** : After a few weeks of the first scene.
- Venue** : RBT Gorjon’s Resort under the Kewratree in Sunderban.
- Participants** : RBT Gorjon, the old crocodile. Foxy and others of Sunderban, and the Representatives of near about all the species living in the jungles and wetlands, rivers and seas of all the continents, arrived in response to the emergent message sent. The contents of the message were something new to them, but they felt the urgency of it, However, there was no trouble to accommodate them.

The venue is the world famous mangrove forest Sunderban. All the species of ‘Life’ were invited through the media prevalent in the ‘Life’s’ system of communication amongst them. All the species sent their delegates except the plants and trees as they cannot move. However, they sent message through their own mode of communication and it was agreed that the plants and trees of Sunderban will represent them in the conference.

Already 7227130 delegates registered for the conference. Among the delegates; 80500 of the vertebrate species, 6755830 of the invertebrate species and 390800 of the plants. The jungle of the Sunderban vibrated as the slogans started rising towards the heaven and spreading over the waters of Bay of Bengal 'Life is eternal', "Living Creatures are mortals".

It is going to be a great conference. First of its kind in the entire universe. Scattered species united and congregated to depict 'Life' on the canvas of the Nature, the scarf of Madre Madonna Mae.

As the convener of the ensuing conference of Species of the Planet, RBT Gorjon is about to welcome all the representing delegates. Foxy invited them to come as close as possible, and declared that RBT Gorjon will offer an address of welcome.

Address Of Welcome by RBT Gorjon

RBT Gorjon : My fellow lives, I deem this occasion, a very great event of my life. I welcome you to attend this conference, first of its kind in our planet the Madre Madonna Mae, with the heartiest cordiality. It is very kind of you all to undertake strenuous journeys to come to this place. We had very limited time to arrange this conference because of the fact that, we have to decide our course of action conjointly and urgently. This sort of conference was not held before on this planet, because, there was no such global cause for it.

At the very beginning of this conference, I would adjure that we shall observe 'fast' during the entire period of the conference. We shall not take any food during this conference under the pledge of the holy name of the Madre Madonna Mae.

[Foxy came up with the slogan: 'Hail Madre Madonna Mae'. 'Long live Madre Madonna Mae'. It was responded heartily. Everyone with top of his or her voices shouted in response and the resonance reverberated like an unsung song. This song has spread over the land forests and waters of the seas to hit the coasts of all the continents to make it definitely heard by the rest of the species of Life, who could not join the enormous

congregation attended by their delegates and representing them. Acolossal event indeed!]

(The silence prevailed)

Gorjon : My dearest fellow species representing delegates, I thank you with all the most profound cordiality of my heart and now, we are to consider the abnormal catastrophic jeopardy, endangering all the lives of all the species of Life to the extent of total annihilation, and also Madre Madonna Mae. She herself is in utmost and horrific danger of getting burnt, as her sacred scarf is on fire due to extra heat generated from accumulated heat on the carbon particles in the atmosphere Madre Madonna Mae's sacred scarf.

The rate of emitted carbon particles are increasing every year. At present, the annual emission is more than 10 billion tons and the carbon particles may be more than 440 PPM. It was 430 PPM by the January 2010 that means last year. In this regard the Bio Scientist Professor Frank Fenner of Australian National University Predicted that the animate world will be annihilated by the end of this century. Although Mr. Hawkins said, we might have another century to live. Nevertheless, he also declared that we have to leave this planet, if we want to survive. We may live the duration of our lives, but what about the next generations? They cannot live. They will have no chance to live. Because the process has already been started. I shall give you a list of happenings in the next session of the conference.

My dear fellow species delegates, it is evident, that we are on the brink of extinction, It is a question of time now. But the most grievous tragedy is this, that a group from another species of 'Life' has caused it. This particular species is coined as human beings. They claim themselves to be originated from one of our fellow species of 'Life'. This may be true to some extent for a certain group in that species, but as that species has been bestowed with conscience, they were intended and scheduled to be the most superior amongst all the species of 'Life'. But they failed in the worst manner.

Instead of attaining superiority in their nature and attitudes, human beings have grabbed the inferior vices of greed, luxury, and chaos and compelling others to follow them. Their principle is based on individualism and they created a mode of exchange with earthly materials.

Now the entire human species is being controlled by their creation. It is called money and the system is known as capitalism. The entire subject relating to the system is called economics, which was meant for human species benevolence and welfare. Nevertheless, a particular group in that species has rotated it otherwise with ulterior motives, the result of which

is the suffering for all the species of the planet.

However, this is the opening session and there are others to enlighten you about the issue. I expect everyone of you will try to contribute to the findings of this session to attain a clear picture for a historic verdict, which will be required for the course of action in very near future.

My heartiest greetings and most cordial welcome to you all and I thank you profoundly for the participation in this noble conference. Thank you once again.

[RBT Gorjon took his seat]

[Foxy got up and raised his right foreleg to indicate silence.]

Huakka Hua Huakka Hua, called Foxy and everybody turned towards him with earnest attention.

Foxy

: My dear fellow species of the 'Life' with Madre Madonna Mae, I am Foxy Bengo jungalia to deliver my speech to this noble congregation. The delegates who undertook various types of troubles to join us in this unique conference of all times, from all over the places of the planet, I thank them from the core of my heart.

I express my gratitude and heartiest thanks to the Royal Bengal Tiger Gorjon for his noble address of welcome to our fellow species.

Next, I express my gratitude and thanks to those members of the species who contributed their maximum efforts to make the message reach to all the species of Life with Madre Madonna Mae, and worked hard to make this conference a success.

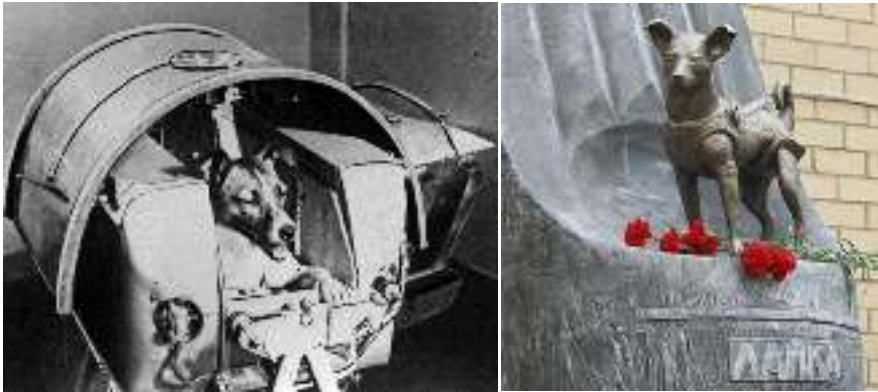

I would adjure my fellow species of the 'Life' to stand up and observe one full minute of pause in silence' to our deepest heartfelt tribute with our deepest veneration for all the species of the 'Life', who sacrificed their noble lives to contribute in research works; like the guinea pigs, monkeys, rats, rabbits and other species towards the progress so far made by the human species. This is the most auspicious occasion to remember the first cosmonaut, first life in the space our most noble heart 'LIKA'. And another unthinkable member of the aquatic species who guided the world football with its prediction, the immortal 'PAUL'. Next we pay respectful remembrance for one and every species of life for the cause of the betterment of the human species on this planet. We really feel elated because we could sacrifice our lives for the human species. Who could not do so.

Now, my fellow brothers and sisters of the species of the 'Life' with Madre Madonna Mae I shall invite the delegates to participate in the discussions. Please, speak out the facts to guide this conference to adopt resolutions to decisive course of actions.

Thank you all.

[Foxy Bango jungalia took his seat]

(Speaker delegates lined up. A list was formed in line and one by one stood up to say his or her speech)

Laika, the dog who became the first living creature sent into space, onboard Sputnik 2, November 1957.
Photo credit: OFF/AFP/Getty Images <http://www.britannica.com/blogs/2011/10/sputnik-space-rac/>

A veteran lion, Afroleo from Africa, led the line of the speakers. He came up to deliver his speech.

My dear fellow brothers and sisters of the species of the 'Life', I am Afroleo from Africa; I am nicknamed as the 'legend in captivity'. *(His deep throat roaring voice captivated the audience in spell bound attention.)* I came to know a saying, "what Bengal thinks to-day, India thinks tomorrow." I thank RBT Gorjon from the core of my heart to live upto that saying and I thank you all to give me this opportunity to be with you all, my fellow species of the Life with Madre Madonna Mae.

Afroleo, the legend in captivity

What to talk about our plight? Every one of you know it. But I shall talk about the world cup football game played recently in the continent. Actually, when the entire world is clamorous on global warming, climate change and vulnerabilities, the venue of the Football world cup games was selected on the hottest continent to show that the human species has the adaptability with the conditions they are clamoring against. They have achieved their goal. But the most remarkable and wonderful role in the world cup football was played by an aquatic species named 'Paul'. He has acted as a super human, other than those, who are mostly responsible for the global warming. Hence, we can quote Shakira for our slogan that "Its time for the species of the most gracious 'Life', to take up the issue of global warming and climate change. The disasters due to global warming and climate change have already bounced upon the planet.

(Foxy showed him his time up) However, as I do not have much time at my disposal I thank you profoundly again to listen to my speech. I wish you would give your heartfelt decision on the issue. Thank you all.

Afroleo, the legend in captivity, took his seat.

Next, a quarrelers owl, sitting on the kewra tree, interrupted the next speaker in the line. She said.

-Excuse me my fellow brother of the species of the Life, I want to know something from Foxy Bango jungalia, so,would you kindly allow me a few minutes.

The next speaker in the line was a delegate from Australia. He looked up and nodded and the owl, as a matter of fact, asked Foxy.

OWL

: See Foxy, you and others so far tried your best to give us a clear picture of the issue in question. But tell me, if you are feeling so sympathetic towards your fellow lives, then why do you stealthily prey on the domestic birds? Those birds belong to some other species; could this be the reason for them to be your birds of prey? Those two legged carbon bits or the group of the human species are doing the same thing with their fellow lives. Then please tell me the difference between you and those two legged carbon bits. You prey on your fellow lives and the carbon bits are exploiting their fellow lives.

Foxy

: Very nice of you to ask me the questions. Now, please listen carefully; it is the system of the creation. We are not facilitated as the carbon bits are. Moreover, those are having wisdom and knowledge and intelligence not to devour their fellow lives. Instead they devour us. Although it amounts to the same thing but they are shrewd and selfish enough to deprive their fellow lives from their rightful possessions, whereas, we do not do such thing. Moreover they preserve, or hoard to earn more profit at the cost of others hunger and deprivation and inconveniences. Which we don't do.

Owl

: Do we do less than those carbon bits?

Foxy

: What are you driving at Owly?

Owl

: I mean to say that those carbon bits are not any different than us in any way.

Foxy

: But they call us beasts, that is much uncivilized of those two legged carbon bits.

Owl

: That is their pleasure, but in their hearts, specially members of that particular group, you can see most ugly beasts peeping with eyes of evil focus.

Foxy

: If that is so, then the basic principle of abnormal lives appear to be the same. But Owly, that is not the issue. When you talk that should be of universal resonance concerning benefit for the life in general.

Owl

: All right, Foxy, now you can tell me about the crimes they have committed against the life in general.

Foxy

: Before that, we are to listen from our guest delegates who are waiting in line.

Owl : Thank you Foxy, you can invite the delegate from the continent of Australia who favored me with the time.

Foxy : Thanks Owlly: [\[Turning towards a kangaroo foxy announced the next representing delegate from Australia\]](#)

Kangastro : I am from flooded Australia. My name is Kangastro.

My cordial thanks to you all. I express my gratitude to RBT Gorjon and Foxy Bango jungalia for the invitation, I implore for your kind attention to the floods in Australia which inundated more areas than France & Germany combined. Our 40 towns are under floodwaters and threatening the world famous great Barrier Reef as tons of sludge pour into the sea. The corals will be damaged very seriously and the Australian authorities counted loss of billions of dollars due to this flood. The disaster occurred due to global warming. You can visualize the overall condition of the species of Life there. Time allotted being short, I thank you again. (He took his seat)

Foxy invited the next speaker from china.

Chinbijung : I am Chinbijung from China and express my thanks and gratitude to RBT Gorjon and Foxy Bango jungalia for the invitation, to attend an emergency conference in Bangladesh; a country of very big-hearted species of the Life. What to talk about our plight! Icy rains have forced to evacuate 58,000 human species alone in south China. You can now imagine the number of rest of the species of Life succumbed to death in south China. All due to global warming.
I thank you again for allowing me to speak. (He took his seat.)

Foxy : Shall we have a recess or continue, I ask your kind opinion.
Every one responded for a break.

Foxy : So, we shall come back after one hour, Thank you.

SCENE 3

The next session of the conference

[The species other than human have four distinct division of the day and the night, Morning, Noon, Evening and the night. Although a few species have divided the night also, because those have been found to announce "Prahara" or divisions of the Night. However, after speculating the time of recess being over, Foxy announced time for resuming the next session of the conference.]

- Foxy** : I request the convener and the Chair life of this session of the great conference to address the delegates.
- Gorjon** : Ye, my fellow lives, I suggest and propose that this session should be presided over by the greatest leader of the fellow species from Africa-our noble brother, Afroleo, the legend in captivity.

[There was applause-someone shouted a slogan-*Long live Afroleo, Long live Gorjon, long live the species of the Life. Long live Madre Madonna Mae*. The slogan shot up like an unusual boom of sounds in unison, echoed, reverberated, and continued for a while.]
Afroleo thanked Gorjon and took the seat of the chair.

- Gorjon** : My fellow lives, I cordially invite you to resume the events where from we had a break. I would request the delegates to participate in an open discussion on Madre Madonna Mae. This mother, the planet has given us lives, shelter, food, Air to breathe and grow, to enjoy her blessings and amenities to live in peace and tranquility of happiness. Nevertheless, I feel the deepest sorrow with pain in my heart to disclose that a different species of life, rather a small group of those living in the realm of the great Madre Madonna Mae has dared to deny her blessings. The crimes committed by the criminals are motivated through extremely selfish greed in their character. Being driven by utter greed they have caused our lives to be annihilated by the last part of this century. Now, I shall give you a list of their criminal activities committed against us – all the species of Life and the planet, our beloved mother, Madre Madonna Mae. I particularly thank great Owly who asked for a list of crimes committed against the species of the life. Now, listen please.

Madre Madonna Mae is donning a cover of about 5.2 quadrillion tons (5.2×10^{18} kg) of air masses, called atmosphere to shield us species of the life from cosmic ultra violet rays and protect us from the bombardment of cosmic particles. Moreover we are to breath to remain alive on this planet. Without atmosphere mean temperature on Earth's surface would be $-18\text{ }^{\circ}\text{C}$. This atmospheric scarf of Madre Madonna Mae has been polluted through emissions of Green House Gases from the exhales of the giants (Mills and factories and power plants and transports. Exhaust gases have very adversely contributed towards pollution of the Troposphere; which is the basic factor for the Life on this planet.

[Every individual present in the conference premises roared in shouting "Shame, shame", "Down with the so called Progress" etc. Gorjon had to intervene for silence.] Gorjon continued-

The consequences we are facing and the crimes committed against us are as follows:

- (a) Global Warming have reasons behind to happen and certain group of human species is responsible for it.

- (b) Gradual Global warming has resulted Climactic climate change globally.
- (c) Climactic Climate change resulted upsetting of the atmospheric and natural eco-systems for the preservation and protection of life on this planet.
- (d) Upsetting of the natural system with the global environment has caused unprecedented natural calamities, with melting of polar ice and mountain peaks resulting increase in sea level, causing unusual floods inundating islands forever and adding miseries to species of the 'Life'.
- (e) Undue sufferings, loss of lives and properties, forced migrations, beside other inconveniences of grave nature have been caused in the lives of all the species of Life on this planet.
- (f) A group of human species have committed crimes of universal degree and dimension. We feel like to brand them as universal cheats as they have,happened to cheat themselves, who polluted Air, Water, Land, deforested plants and trees, caused unusual, unnatural and catastrophic havocs for the planet and the inhabitants. These universal cheats are also planning to leave this dying mother of species of the Life and shift to some other planet or construct holes and burrows to live under the seabeds.These universal cheats have forgotten that those are 'mortals' and cannot go to some other planets, supposed to be existing beyond 2 billion of light years. There are a few planets resembling our mother, but out of 10 billion Trillion stars and planets. It will not be so easy to reach there.

Gorjon

I suggest that we send a universal alarm message to those planets “not to receive, accommodate or allow them to be nearer, as these fellows have been branded as ‘cheats’ in our planet, the noble Madre Madonna Mae.

To support us and to patronize our campaign to bring these cheats to face justice, I fervently implore, adjure all the living replicas of Madre Madonna Mae to stand up in unity and voice in unison for justice. We should demand steps proper/ retaliation to keep our babies safe and sound from all sorts of calamities and danger of annihilation caused by these universal criminals. Let them face and suffer the worst heat emitted by sorrowful sighs and lamentations and death throes of the species of the 'Life' on this planet.

I would like to request other delegates to make solid proposals in this regard. Thank you all. (Gorjon took his seat).

[The audience remained spell bound for a while and the silence prevailed, was somewhat unbearably ominous. The audience as a matter of fact could not imagine the extent of danger in the process to hit or fathom the depth of the catastrophic consequences awaiting the species of 'Life' on this planet]

[The Chair life's seat was on a white-ant hill. Afroleo from his seat signaled Foxy and when Foxy came up, he told him something in whispering voice. Foxy got down and raised his right forepaw to indicate attention and silence to prevail.]

Foxy : Please pay attention. The venerable Chair life of this session has desired to listen from the Plant species and after them we shall again invite vertebrate and invertebrate species delegates to narrate their plights in brief. Now, I am inviting the noble Kewra tree to narrate the plight of the Plant species .

[The Kewra tree on which the Owl was sitting cozily, heaved a sigh for the untold miseries the entire plant-world suffered at the ruthless hands of the human species of Life. His deep melancholy voice found every one very attentive and sad.]

Kewra Tree : What to talk about life in general in the plant world. We the plants all over the globe, are the worst sufferers. We save the lives of the species of life on this planet. We supported lives since time immemorial. For example, everybody knows the legend of Noah and of the great Deluge of very ancient times. Noah had to build a boat of such a size that contained many species of life in pairs. We, the trees contributed to save that ungrateful species, who, instead of having gratitude in their hearts zapped us like they hated us bitterly. The trace of that boat has been discovered on the Alps top. That is the proof we scarified our lives for the benefit of others since long. But starting **from Amazon Rain Forest to Zululand (now Kawazulu) in South Africa, where have we not been zapped and tortured?** You'll find our contribution everywhere. **From cradle to coffin, from lifeboat to lath, where have they not used us?we sacrifice our lives every day for the human species, but those two-legged carbonbit creatures are very ungrateful and they kill their benefactors unscrupulously.**

My fellow lives, at present, you know that we the trees serve as their carbon sinks. You'll be astonished to know that the Sunderban has been evaluated as a carbon sink. I feel extremely sorry for those mental cases who dared to offer a price of TK 15000 crores for us. But what about the tropospheric area of Bangladesh which they are contaminating with GHG? The price of tropospheric area comes to 11,38,61,348 million US dollars @ 1 dollar per ton of air in the area they are polluting. Hence, Gorjon's list of allegations against the universal cheats will be a long one, I assure you. As the time is up, I thank you profoundly for being all ears to my speech.

Foxy : (Looking up to a Monkey) It's your turn now Monku.

Monku : With hearty greetings for all I want to say that I fully agree with the feelings the Kewra tree is nursing in its heart, and Foxy, have you recorded what this veteran fellow species of Life stated? It is a Universal Statement. All of you

know that one of their fellow lives a-a-a-a named Darwin told the world with some evidences that those creatures evolution had been through our lines. As a matter of fact I feel sorrowfully ashamed to hear that because of the fact that, structurally we are not akin to those two legged creatures who are far different than us species. Their constitutional factors throughout the entire creation are different. I don't know what they would gain by being from our lineage? If we wanted to, we could build up nests like birds or live in some better manner in the jungles, but we love freedom and do not want to captivate ourselves within some sort of dens and boundaries, as the two legged creatures are doing. I ask my fellow lives who are on two legs that I do not have any intention to offend them. However the activities of Their carbon bits clearly declare that they have superseded us in naughtiness, or you can say evil and criminal deeds. Yet, I disclaim their claim. I don't want to be more degraded and ashamed due to those uncivilized creatures from being from our lineage. Foxy, you had better keep me recorded to quote me whenever needed. Time allowed is over and hence, thank you all.

Foxy : I happily announce the name of a fellow species who has undertaken a very long and strenuous journey from a very long distance Brother Snow Dew, The delegate from the North Pole, Please.

[A big white bear raised itself up and nearing the Chair life started delivering his speech]

Snow Dew : My dear Fellow Lives. I am very happy to be with you all and thank you, Foxy, to announce me to the delegates present I express my heartfelt gratitude to RBT Gorjon to give me this opportunity to be with you all. However, with full respect for our Chair life and my fellow species of the Life, I tell you that we were quite alright with the Nature in the Arctic Region. But due to obstinate nature like our Rhinos, **the human species specially who caused this global warming are not paying any heed to the voices of distresses from all over the world.** But for your kind information the germs of cancer, which used to be staying cozily with the polar ice have become free and active with the molten ice and are getting mixed with water all over the Globe. Hence, the stubborn human species responsible for this melting of ice has created a trap for themselves as well. That is why those people are hellbent on finding out another planet to find their safe houses. But, I am very much in doubt, whether they can make it possible, because they will not get that time and opportunity to be spared from the wrath of agonized sighs of other species of the Life on this planet for the distresses caused by those criminals. I thank you again and very gratefully request that the next speaker be announced. (He took his seat)

Foxy : Thank you Snowdew and now our fellow species of Life I announce the name of our brother Rhino.

TheRobust Rhino : Thank you Foxy Bangajungalia, I am grateful to all those who contributed to organize this extra ordinary conference which has enabled me to be with you.

However, I wish to let our fellow species of Life, Snowdew know, that, please don't label us like obstinate or stubborn as you said in your speech. Foxy, for your kind information we are conscious about ourselves and practically all of you can see that we don't have enemies except those two legged human animals. Those human creatures are actually dull headed without any foresight. Otherwise, they could have assessed the profit they are going to gain from their activities, specially greed driven activities. They do not have any respect for the species of the Life, means no respect for themselves as well, Hence it is my opinion that they should be paid back with their own coin. Thank you all again, with a request for taking decisive action plan against those criminals.

Foxy : Now, it is the turn of our dear fellow species of Life's delegate, the great African elephant Leader Elephafro, please.

Elephafro : My dear fellow lives, all of you must have gone through our history. We have been killed to give those two-legged criminals our tusks for ivory and massacred us whenever found the opportunity. Not only that, we have always been utilized as a load lifter. They have committed so many crimes on this planet that the broken hearts sighs have accumulated as curses to hit those like thunders from the sky. But we the species of the Life and Madre Madonna Mae could not get rid of those criminals. I call for such actions against these universal criminals that they either should be de-planeted by themselves or die with ignominy of unheard of insults, which would relentlessly punish them mentally and making them physically paralyzed to suffer untold sufferings.

Foxy : Thank you Ele. Now, I would request our Chair life to address the audience to bring this session to an end for to-day. Thank you all.

The Chair life : My dear fellow lives and dear Gorjon and Foxy as well, I think it's high time for us to declare all out retaliating actions against those culprits, as depicted by the delegates of different regions. The species other than those culprits have tolerated beyond the limit. It is very clear from the speeches delivered by the delegates that the shameless activities and utter greed of a group of human species have finally led us to a total annihilation by the end of this century. Therefore, along with our beloved holy mother Madre Madonna Mae, we all are in very big danger.

Further, I would request all of the heads of the regions on the land and the seas and the sky exclusively to be present in the final decision making meeting at Gorjon's resort after two hours of group discussions with their aides, and delegates to facilitate the heads of the regions to take their decisions.

With this, the session is declared over. Thanks to all.

(Everybody leaves the stage)

(Drop curtain)

SCENE 4

The Emergence of the United Species Alliance (USA)

Commentary: Gurubaz, an eagle of the middle age, loved soaring. Gurubaz (Most probably it is of the Same line from the 'Garur Bird' the mount of Vishnu of the Hindu mythology) was in the South Africa when the Durban conference on the climate change was going on. He received the message of the ensuing Sundarban conference of the species of Life, other than human. The Durbanconference resulted in the same fate of other conferences on the issue, which started since 20 years ago.

It was early night and the heads of the regions and zones in the special counsel forum was in Gorjon's resort. All of them heard the sound in the calm nocturnal sky over the Sundarban, but a bat sensed the real cause of the sound and kept on sending guiding signals. After a few moments Gurubaz landed on the Kewra tree. Everyone looked up and Gurubaz locating Gorjon, landed nearby.

Gorjon was waiting for the message supposed to be delivered by Gurubaz. Gurubaz drew breathe in exasperation and disclosed the news of Durban failure. The news of failureof the Durban conference on climate change in the South Africa, sealed the decision of the rest of the species of life on the planet. They helped to draft the conclusive declaration of the conference and the following points were settled unanimously.

Gorjon : My dear fellow lives, we are here to decide once for all, our course of actions on the issue of Global warming and climate change. You might have guessed already that we have bad news as the Durbanconference could not yield positive results for us. It's a failure like other conferences of the human species. Now, I ask your wise decisions, one by one, for steps to be taken.

Afroleo : My fellow lives, we require to prove our worth in existence and I propose to form an alliance of the rest of species of the Life with Madre Madonna Mae. Coinage of the alliance thus formed, can be "**The United Species Alliance (USA)**".

- Gorjon** : Anybody having any comment on the Proposal.
(There was none)
So, the proposal of 'The United Species Alliance' having no objection or comment, is passed and accepted unanimously, and I propose the name of our dearest veteran Leader Afroleoto be the first Executive Head of the USA. Any comment?
(There was none)
- Foxy** : Long live Afroleo, Long live The United Species Alliance with Madre Madonna Mae. Long live RBT Gorjon.
(The Slogans erupted like a volcano of sound and the rest of the delegates joined to form a sound of a cataract.)
- Afroleo** : My next proposal is to **contact all the members of the human species of the third world as well as indigenous, poor and marginalized people who are the victims of the imprudent sects of the human species to include them in our Alliance.** Also will be included the replicas of Madre Madonna Mae, with some special privilege and exceptions for them.
- Gorjon** : Any comment on the proposal of the Great Afroleo?
(There was none) so, the proposal is agreed upon and passed unanimously.
- Elephafro** : My fellow species with the permission of Afroleo and Gorjon, in my consideration, whatever we have done so far related to the conference, are our, very great achievements. Now, to solve the problems we are facing, we should have a clear picture. Let me clarify one by one. You'll very kindly fill up the gaps.

First of all, **The planet Earth terminology is wrong** in the sense that it not only contains earth, but water, air, and many other things or materials. Because of the fact, that it contains life and itself a living planet, as it facilitates germination of Life, helps to grow, nurtures takes care of the lives on it like a mother, the name of the planet as we address her **Madre Madonna Mae, is the most appropriate title** she holds with reverence. She is our mother and there is no doubt there in the statement.

Elephafro paused for a moment then he spoke again.

My fellow lives, count down for the last moment has already been processed since long. It is now the question of time in between us, the species of the life, and the Zero second. It is inevitable and unavoidable that we are to die, when the process of annihilation is 'on', because the destructive processes will not be and now cannot be stopped. Hence, we have two ways to solve this problem.

First, Afroleo being the Chair life will allow Gorjon, the Secretary General

of the USA to send a letter of ultimatum to the Secretary General of the United Nations of the human species alone, which as an organization is not capable to control the root causes of the Global warming and climate change, beside being influenced by the agents of the Universal cheats and criminals. The UN of the human species has no intention to preserve the atmosphere and Global environment and Natural Resources, which is not deemed useful for the human species.

In such context, the letter of ultimatum must incorporate a countdown process. In that letter a very clear warning of total suicidal activities en masse of the lives of species which will be carried out collectively, on this planet, except the perpetrators in the human species.

My fellow lives, I see the letter of ultimatum as a declaration of total war against the universal criminals, in which the perpetrators are challenged to confront us with all their might, their most modern lethal weapons, their united strengths, their united forces, united power of violence. And we, the rest of the species of the Life, as we are mortals, shall retaliate those universal criminals with the mightiest weapon they can ever conceive of, the most and must be effective weapon of "NON-VIOLENCE".

We shall set examples of the effectiveness of our weapons practically in which hundreds of birds will commit suicide in the sky collectively and drop on the ground like rain (happened in Arkansas, Louisiana and Kentucky). We shall give them another example of warning through collective deaths of the sea fishes not less than 2 millions which the criminals will find on their shores as a sign of our warning's practical exercise, (happened in Maryland in Chesapeake Bay and show-fight)

We love, admire collective existence. No individualism, which has been found to be breeding corruption, pollution and jeopardizing peace and tranquility of the universe. **Individualism of the human species has violated the Universal law of collective existence.** Through our collective sacrifice, we will let the human species to enjoy a lifeless planet with their all sorts of materialistic luxuries and riches.

And now, we shall have a program in the morning to convince the Adibashi (Indigenous) human species residing on the other side of the Sundarban Tributary, in that, we are to show that we are also friends of the human species except those derailed groups. Please organize it. Thanks to you all.

Elephafro took his seat.
Total silence prevailed

*The curtains closed to meet in the middle.
Interval period will be with mildly joyous and melodious music.*

SCENE 5

Wildlife species and human species are paying their respect to the Madre Madonna Mae

- Venue** : Residence frontage of the Munda Communities in the Sundarban area divided by a tributary river. In the opposite bank of the Sundarban Area all types of forest species of life gathered and in the river all aquatic animals and the birds on the trees gathered.
- Time** : Morning. In the rays of the rising sun over the Sundarban (the Munda Communities will be on the Western bank of the river). Everyone in the community gathered to look at an unbelievable scene on the other side (Sunderban forest side). It was unimaginable.

Commentary

Everybody gathered on the western bank of the tributary dividing the Sundarban, the world famous mangrove forest shared by Bangladesh, India and the Adivashi Munda (Indigenous) communities localities.

The people of the Munda Community were spellbound to see the scene, in which wild hens and herons, doves and ducks with other birds and fawns were parading along the tributary bank and in front of the tigers, foxes, deer elephants and other types of wild animals and none is attacking anyone for a good meal. The crocodiles were also lined up along the bank and varieties types of large or small fishes scampering beside. It appeared to the on lookers that the wild birds and animals have arranged a fair of nonviolence- grand show.

It was really an extreme test for the Mundas and individually they considered that they were dreaming. How can it be true? The wild animals are not catching or killing the birds or animals. The babies of monkeys are pulling tigers tails to shift them away from the path to find a better view in front. But the tigers are behaving like pet cats or dogs. How can it be possible? Monkeys were in lordly mood, peacocks and peahens were in such playful mood as if those were in some sort of festival of their lives. Every point of the situation was abnormally normal.

One elephant having some monkeys riding on its back stepped ahead down the slope of the bank and the crocodiles in its path moved aside to give the elephant a passage to the river. The elephant moved ahead and was in the water and swimming towards the opposite bank where the Munda People were waiting to see the fun with astonishment, reached on the other bank of the river. The elephant crossed the river with the monkeys and was on the bank and stood there.

A young man renowned for valour in the Munda community approached the elephant with a small length of a banana plant, which he was carrying home for his cattle. He offered the piece to the elephant and to the utter surprise of the young man and the community the elephant raised its trunk in salute as the young man observed in a circus and then gently took the piece of the banana plant and shoved it in its mouth and kept on chewing it with

delicious leisure. Seeing the event the other boys and girls were encouraged and as they desired to prolong the scene, ran towards their cottages and brought clusters of banana, for both the elephant and the monkeys. The boys and girls went nearer to offer the banana to the animals, they took those unhurriedly and shown respect to the offerer.

A very old Wiseman in the community was informed about the event and was helped by others to the place where both the parties were joyously enjoying the event. As soon as the elephant saw the veteran, approached him and showed respect with the trunk raised and then sat down in front of him. The old man asked to extend itself its trunk towards him and the elephant abided by with gentle respect. The old man touched the trunk of the elephant with benign attitude as if to bless the elephant. It was an overwhelming sight of joyous event for both the parties of the either side of the river.

The old man looking in the eyes of the elephant showed it some sign of a message, which the intelligent elephant could understand, and in response the elephant stood and backed up a few paces from the old man and then turned about, to face other waiting animals on the other bank of the river and emitted a sound. The awaiting animals, birds, crocodiles and fishes received the signal in controlled pleasure and swam and flew over the river to reach the Munda Communities.

It was unbelievably an event, first of its kind in the entire universe. The joyous mood in the Munda Community subsided with the realization that they have no capacity to entertain the guests of all times to honor them with their visit. The guest animals guessed the reason of the perplexed faces of the people and realized the situation. The elders gathered to honor the event and as such instructed the entire community (near about 600 families) to fetch whatever they could afford to offer to the guests. Although the guest lives could not get bellyful but whatever was given they received with grace and much humble gesture. The elephant being the spokes-life assured the oldest veteran that they are much pleased, pleased and overwhelmed with joy and gratitude as the Munda Community has accepted them as fellow lives.

The news of the event reached the other localities in lightning speed and the Bawalis and fishermen, visitors in Sundarban on purpose came to know about it. People rushed to see the sight of human beings and animals of wildlife are together as if in an annual fair in the region. The unusual event, first of its kind in the entire universe has given birth to numerous speculations.

However, the hint and sign communications between the elephant and the oldest Munda Leader convinced every life present in that moment that both the wildlife species and human species are both grateful to the Madre Madonna Mae for sustenance of the lives of the species and both the parties have agreed to remain friendly and help each other in needs. The elephant after showing respect to the Head and Leader, the oldest man in the community, turned back for the jungle along with other wild live's species. And the scene of departure was really a melancholy one.

SCENE 6

An ultimatum to The United Nations of the human species of 'Life'

Commentary:

Rosalind Tripura alias Rosy, an uncommon indigenous woman from the Tripura community of the Chittagong Hill Tracts in Bangladesh, is about twenty-eight years of age; she is smart, intelligent and good looking and well qualified. She happened to top the list of persons who appeared for the interview. The post she secured is for the private secretary of the Secretary General of the United Nations of the Human Species of 'Life' on the planet. She is very happy with her position, assignment and responsibilities.(Commentary ends)

(ROSALIND ENTERS In the Scene)Very punctual in her office, she took out the keys for the door of her office chamber, opened the lock and entered to be with the day's errand. She took her seat behind the desk but was astonished to find an envelope addressed to the Secretary General, on the desk in front of her. She very clearly remembers, the desktop was clean and clear of any litter or letter, when she left the office for the lift after closing the door. Unmindfully she reached for her purse to feel the existence of the keys although she has opened the door of her office a few minutes ago. The keys were there. But she was really puzzled how and who got the envelop particularly on her desk and the door being locked.

However, she hesitated a bit to open the letter suspecting something evil, then recovering herself, opened the envelop without any occurrence. She heaved a sigh of relief and started reading: Rosalind reads the letter aloud (over a hidden microphone)

Dear Mr. Secretary General,
The United Nations of the human species of 'Life',on
The planet Madre Madonna Mae.

Dear fellow life,

This is for your kind information that whatever is written in this mode of communication has the concurrence and appraisal of the leaders of the delegates, assembled in the Sundarban Forest in Bangladesh in a conference, the first of its kind in the entire Universe. The respectable delegate lives from all over the planet and representing the species of the Life, unanimously adopted the following resolutions, unanimously accepted and passed by the delegates present in the conference. I am, as duty bound, solemnly let you know that-

The Majority of the species of Life, having no mandate for them in your UN activities, have formed "The United Species Alliance" on the following grounds:

1. That, without being involved in anyway, without being responsible in any manner and without any contributions made by any species of the majority species of the life, except a negligible portion of the human species, are already suffering and

awaiting total annihilation by the end of this current century due to Gradual Global Warming induced the Climactic Climate Change.

2. That, Global warming has caused polar ice deposits to melt, to melt the ice on the mountain peaks, to raise the sea level to cause inundation of the coastal regions causing encroachment of saline water to cultivable lands, causing no yield of crops, causing starvation and premature deaths due to malnutrition in the species of 'Life'.
3. That due to melting of the ice, the accumulated germs of Cancer got released from the ice packs and the water is being contaminated with the cancer germs.
4. That, food security has very badly been jeopardized due to Global warming causing climate change all over the planet causing multilateral havocs and disasters and enhancing natural calamities throughout the planet.
5. That, being mortals we the majority species of Life, do not want to die individually, throbbing and suffering bitterly, as our food, shelter, breathing air, drinking water have been deprived of us.

We have observed that your UN has no commitment for protecting the planet from unnatural manipulation, rather quite busy for creating 1st, 2nd and 3rd economic worlds. We are shocked to see your UN facilitating politricks to create weapons of mass destruction to keep the planet as war fields as well as promoting ways, so that money can control the planet!

All the delegates of the United Species Alliance have unanimously agreed to declare an all-out war using the weapon of Non-violence against those perpetrators who are continuously torturing our common mother "planet, Madre Madonna Mae".

We, the members of the United Species Alliance are giving you an ultimatum of 336 hours from the moment this message touches your hand. We are not giving you any misconception about our program and as such, we have already set examples in Arkansas, Lusiana and Kentucky; where you have seen hundreds of dead birds rained from the sky, similarly, we have given instances in Sweden. To corroborate our statement further we have given you millions of dead fishes in Maryland shores. Hence, you can be assured of our plan and intention. The following species of the life have agreed upon to die collectively including the seeds and sperms. We shall leave you on this planet to live a forlorn life, a life you can not imagine.

The species of life to abide by the resolutions adopted in the conference:

1. VERTIBRATE ANIMALS

Category	Species
Mammals	5,500
Birds	10,000
Reptiles	10,000

Amphibians	15,000
Fishes	40,000

1. INVERTIBRATE ANIMALS

Insects	5,000,000
Arachnids	600000
Molluscs	200,000
Crustaceans	1,50,000
Echinoderms	14,000
Others	7,91,830

2. PLANTS

Flowering (angiosperms)	Plants	3,52,000
Conifers (gymnosperms)		1050
Ferns and horsetails		15000
Mosses		22750

And more, which are not discovered as yet by human species.

With a hope to see you again after a lapse of 6,60,000 years.

Thanking you,

Signed by

Afroleo
The Chairlife
The United Species Alliance.

RBT Gorjon
Secretary General,
The United Species Alliance.

(Rosy's silent Role); Rosy did not waste time. She could easily visualize the entire scenario like a flash of lightning. Because she has experienced the changes occurred at her CHT home, where the zoom cultivation is no longer in existence due to climate change.

She moved, got a few photocopies of the ultimatum immediately and personally made sure that those were on the desks of the top executives, when , the secretary General was going to talk to. She also kept the original on the desk of the Secretary General covered by another glass sheet, with a note of request to the SG not to touch the letter even by mistake. Then she started dialing to all the concerned executives to be available as quick as possible in the UN Headquarters.

Rosy felt irritated, and was in growing tension. She did not like it and at the same time she could not get rid of it. However, she finished her job. All of a sudden a thought flashed in her mind and she felt an unexplainable anguish in her heart. It was the story of Midas and how he lost his very affectionate daughter due to his greed for gold. As soon as Midas touched his daughter she became a statue of gold.

Rosy could not calm herself down her thought found words to express. She was in soliloquy "Oh God! Oh my God almighty! It would be the worst reprisal in the history of creation, on the planet Earth and of Universal caliber, if all the species of Life embrace 'Death' en-masse and simultaneously and leave the planet forlorn except Midases. My God!

The thought unnerved her and she shuddered with horror and collapsed in her seat.

*(During the entire period of Rosy's acting a melancholy music was being heard)
(The curtain Drops)*

The End-word:

Evolution of 'Life' is a Natural Process with this planet. In the universe, no other planet has so far been found to be accommodative of 'Life', speculated ones are 200 crores lightyears away and the numbers are so meager amongst some ten billion trillion celestial bodies, that can be considered as very negligible. This can only mean that the Nature of the Planet Earth has exclusively been attributed with the requisite factors contributing towards sustenance of the 'Life's species on the planet.

Growth of the species, existence or extinction are also a natural process. The interaction of the factors contributing towards sustenance have also been observed to be either pre conceived or natural in the processes.

Co-existence of parallelism is also an established fact. This parallelism of equal and opposite forces (creation and destruction) or existence, contribute towards stabilization or balancing. Hence it is clearly revealed that the 'Existence' or 'Extinction' on the Planet Earth or the universe as a whole, is based on very delicately arranged principles over 'Time' ie. E/T

The creation superimposing over the creator is not out of the principle. In this case, money was created by human beings to facilitate transactions in day-to-day activities. But the 'Money' instead of promoting 'welfare' demoted human beings from the inherent attributes and converted to a tool of destruction or extinction. It caused advancement of greed and power mongering. These were to happen, to keep the cycle of evolution and extinction intact in the processes.

The CO₂ or the GHG were to be emitted to bring about extinction of the Life's species on this planet to avail the period of rest for 6,60,000 years and recover for cycling again, it is speculated as such.

The gratitude to be existing and a feeling of self-esteem for being in the existence regarded as the bases of life in tranquility in the Universe. It is not the 'busy-ness', but the 'ease' with normality, to become a part of the tranquility, in which the entire Universe exists. "Business" is not "ease". It is not the normal condition for existence. In business a life exists in the average only for 6,50,000 hours. But in 'ease' a life is a part of the eternity. This used to be the difference or line of demarcation, between the Ethical East and the Materialistic West.

B.R. KHAN
